

Beyond the backend

How Go Engineers Are Becoming Product Powerhouses

Piotr Niewęgłowski

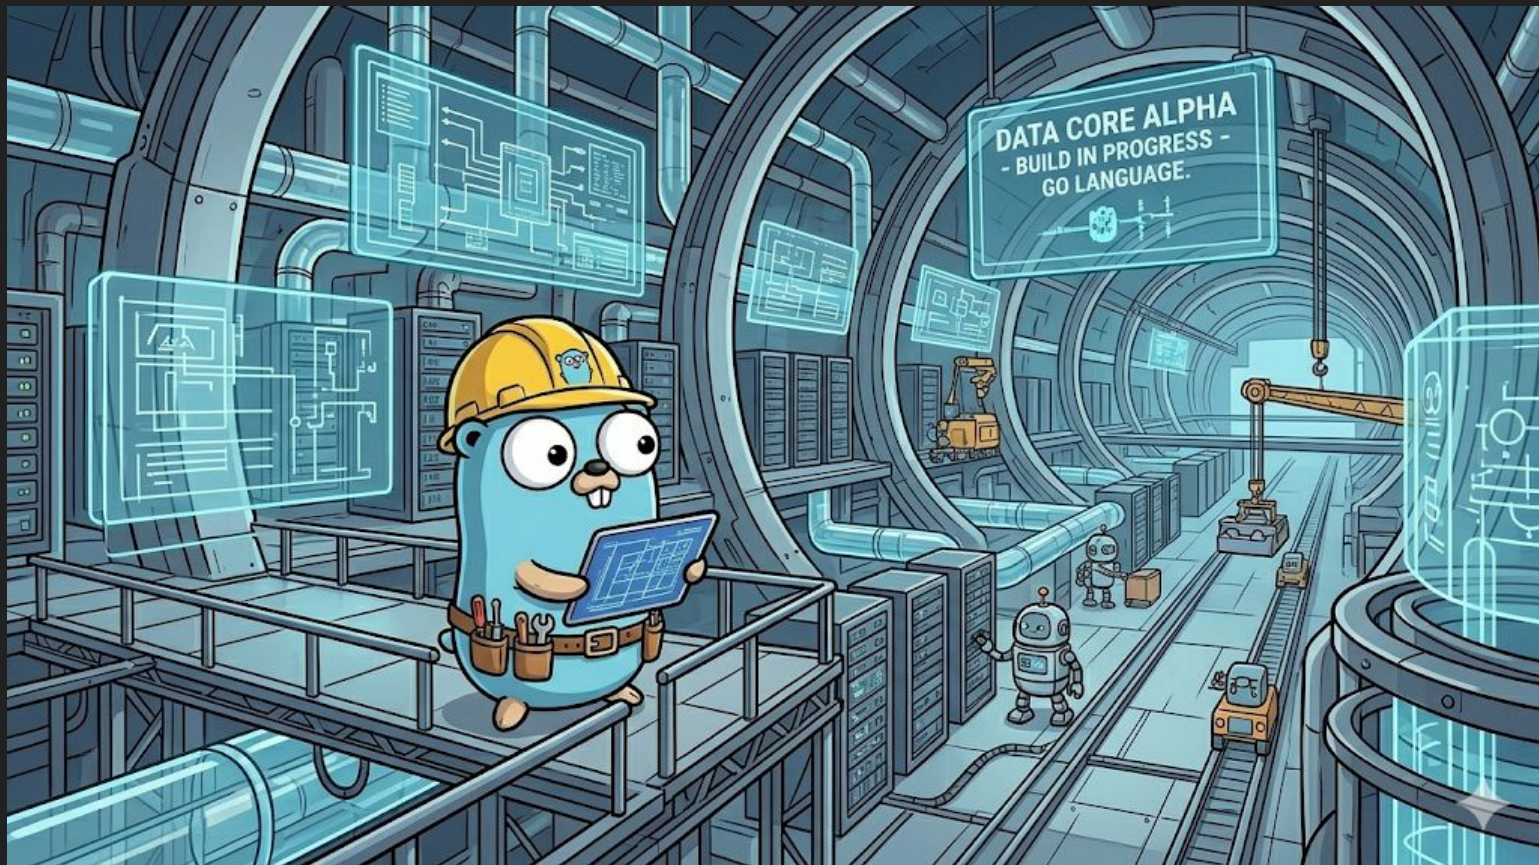

Who am I?

Agenda

- **My Journey: The Good and the Bad**
- **The Divide: Platform vs. Product**
- **What do Gophers do today?**
- **Defining the "Product Engineer"**
- **The Path Forward**

Why I wanted to become a Gopher?

My first contact with Go

The Go Playground

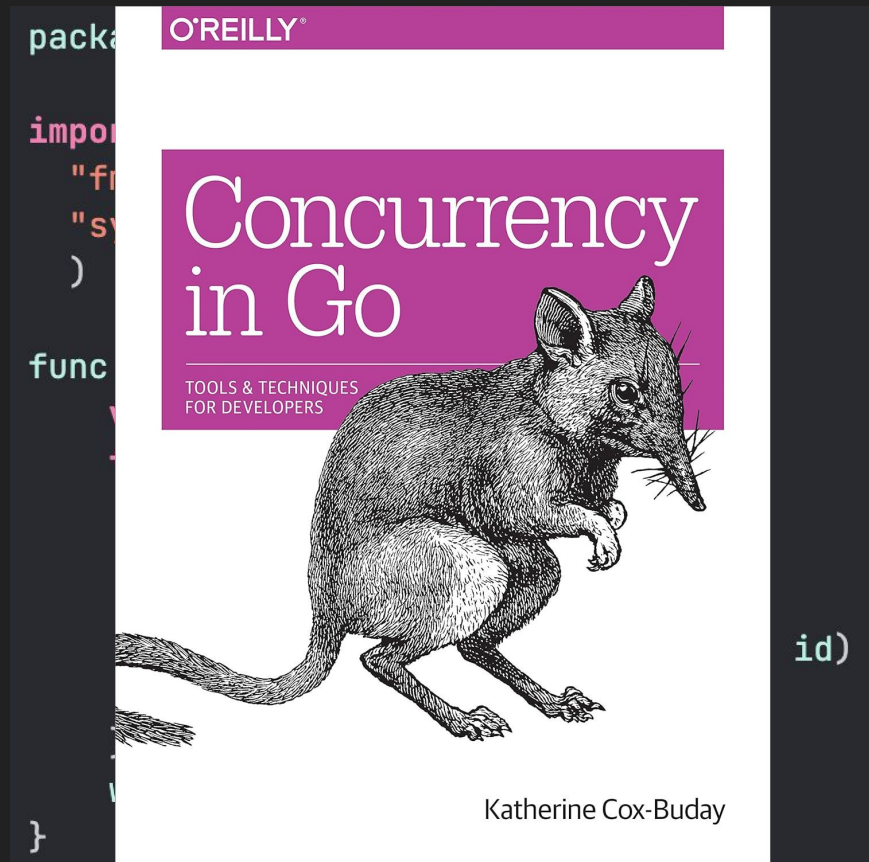

Press Esc to move out of the editor.

```
1 package main
2
3 func main() {
4     orders := []string{"Espresso", "Latte", "Decaf", "Cold Brew"}
5     delete(orders, 2)
6 }
7
```

./prog.go:5:9: invalid argument: orders (variable of type []string) is not a map

Go build failed.

Go Concurrency: Simple until it isn't

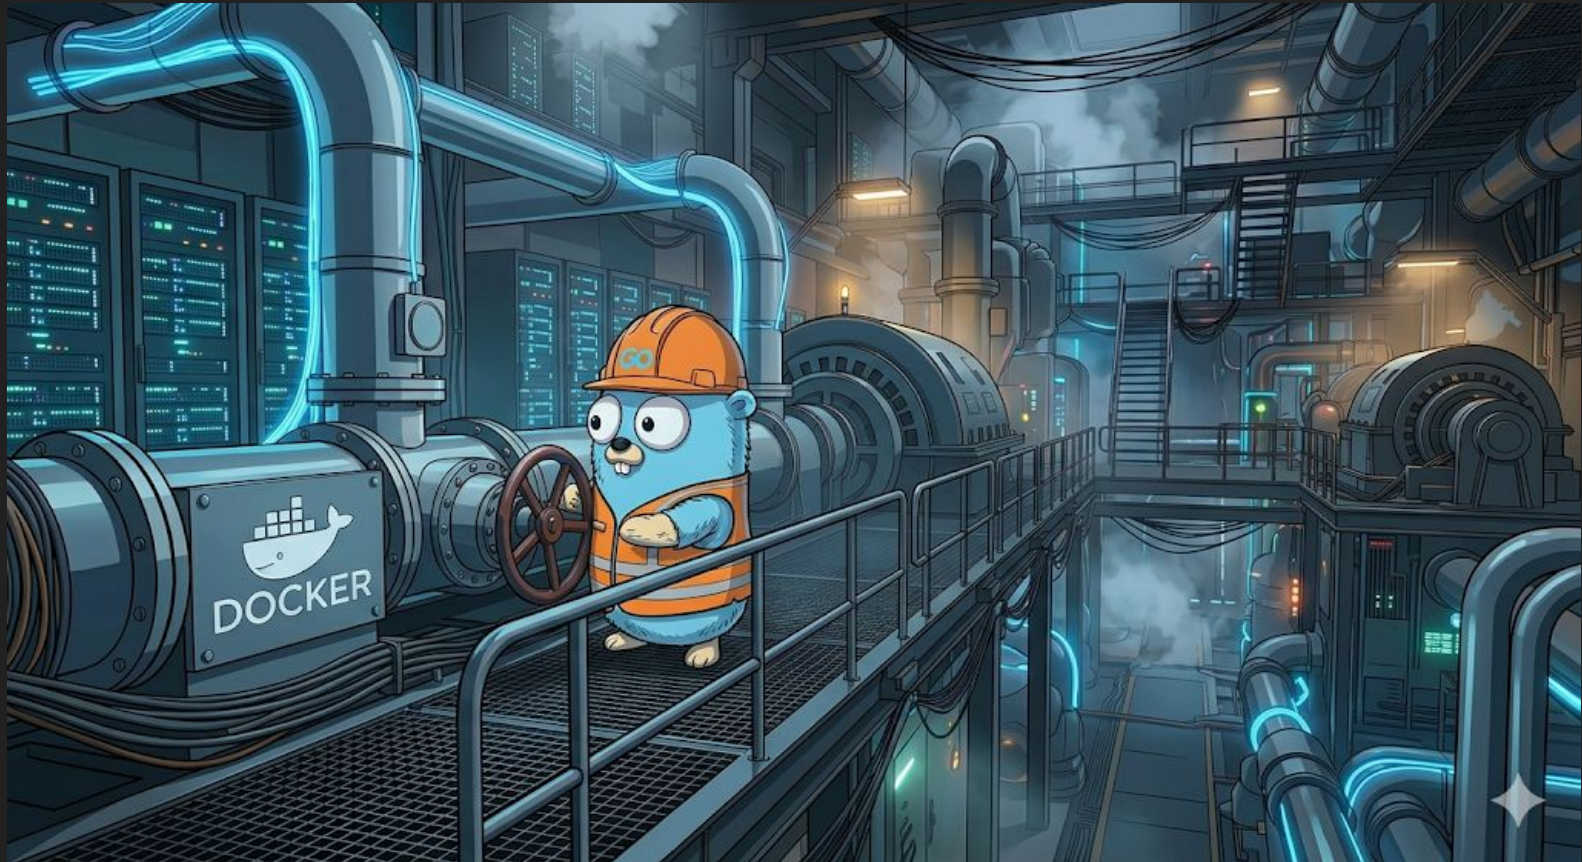

Being a part of product team

Changes!

Being a part of platform team

A side note: when Go is not enough?

Switched from Rust to Go P95 now 10-15 ms at 16k QPS

No shade to Rust, but our bidding platform using ONNX Runtime and Rust gave us endless compatibility headaches with outdated crates and poor performance we were stuck at 50ms P95 at 16k QPS. The bidder needed to consistently respond under 15ms, so we switched to Go. Fewer lines of code, and with every round of tuning, the latency kept dropping. We finally nailed **10ms-15ms P95 at 16k QPS**.

Back in business

Is Go more a platform or product language?

- Docker
- Kubernetes
- Terraform
- Prometheus
- Etcd
- CockroachDB
- Grafana

- Monzo
- Uber
- PayPal
- Delivery Hero

DDD as a product centric metric?

ddd stars:>100 language:C#

ddd stars:>100 language:Java

ddd stars:>100 language:Javascript

ddd stars:>100 language:Go

What people build using Go

What types of things do you build with Go?

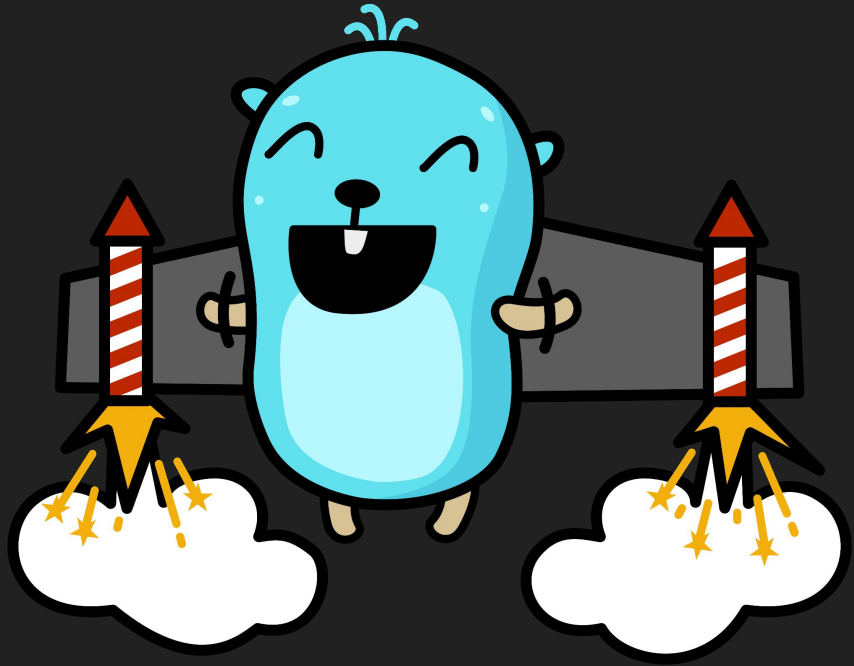

(select all that apply)

n = 2,502

My current work - Product Engineer*

- Knows product very well
- Can propose different solutions knowing the business constraints
- Understands the market and the importance of time to market delivery
- Is a partner to business / product people
- Always think how the feature will work for users and what is the UX

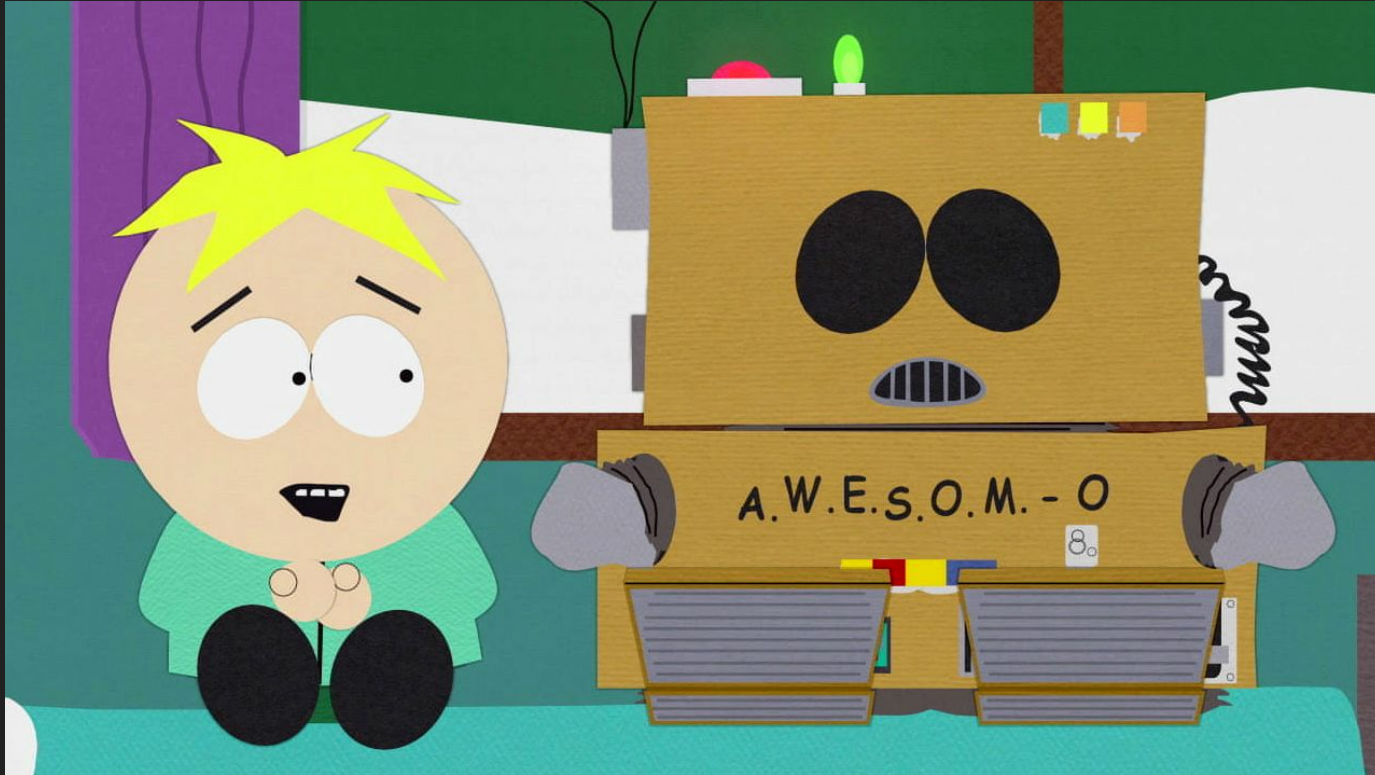

What about hiring?

Summary

1. Go is a perfect language for platforms
2. It is more popular for pure product engineering than I thought
3. It super-cool and super easy but you need to write a lot of code in comparison to languages like TypeScript

What if I told you that writing more code is not a problem?

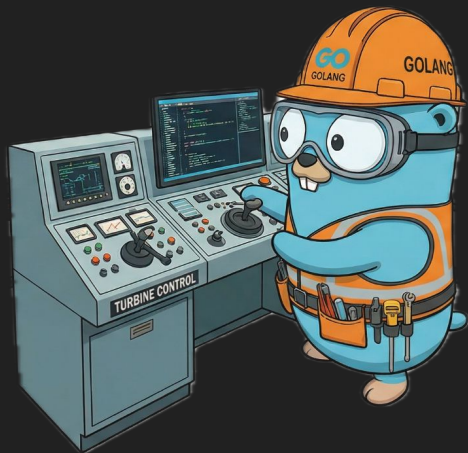

A game changer moment

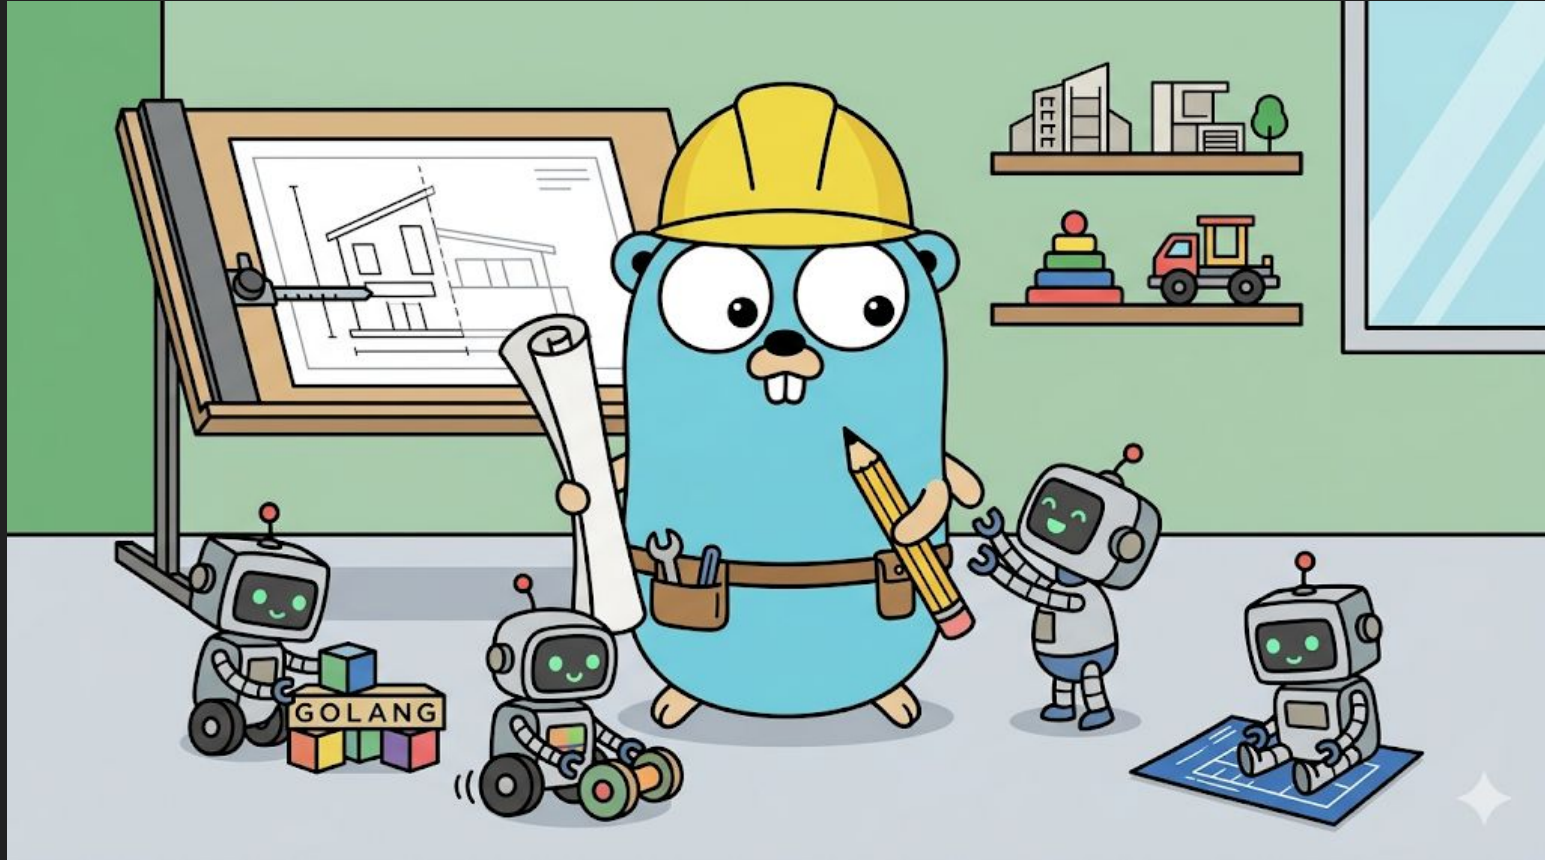

Opus
4.5

What is the future of software engineering?

The work will be harder

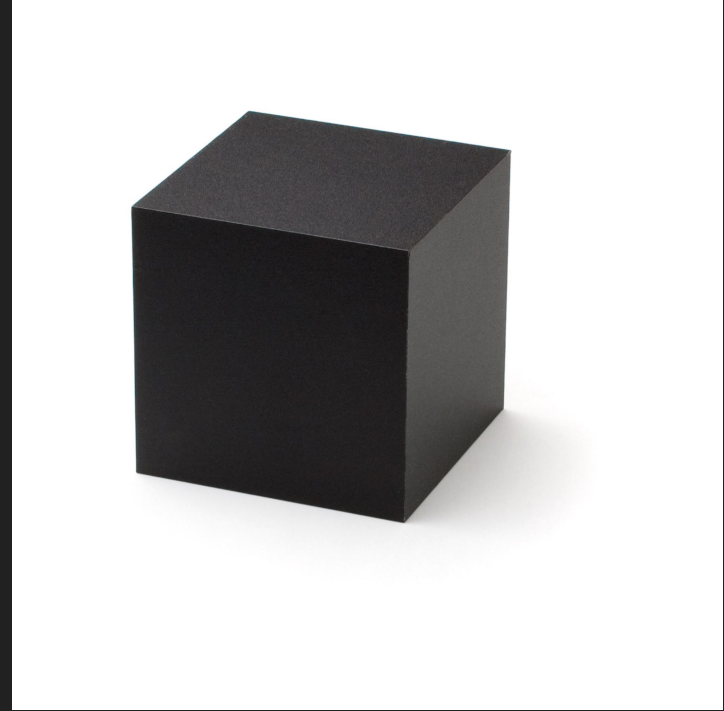

What is our vision of the Product Engineer at Saily?

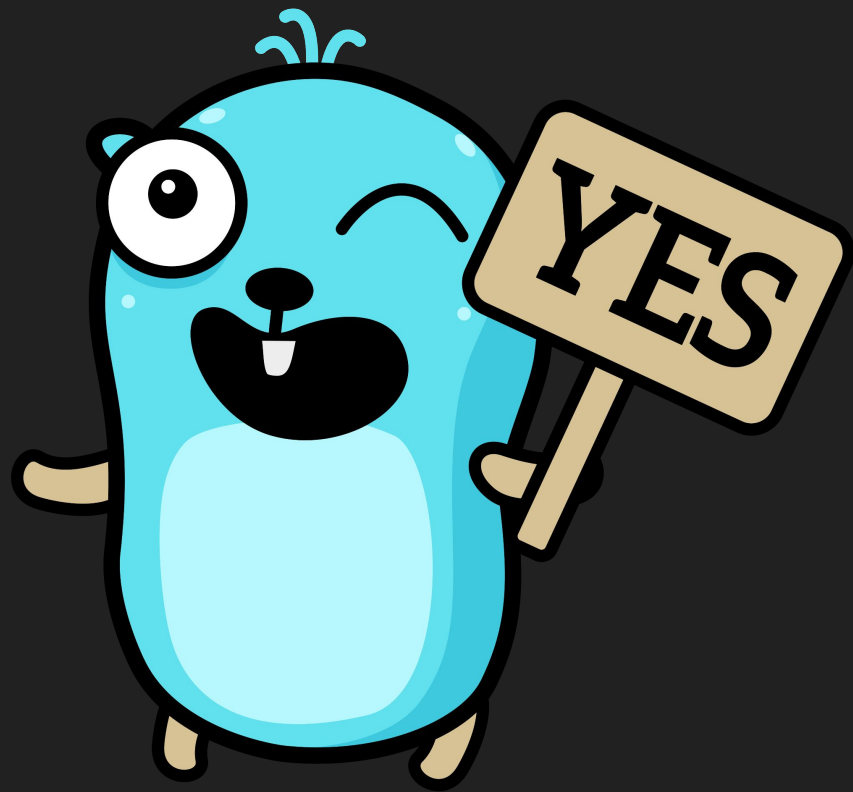

Why it is so cool?

What are the risks?

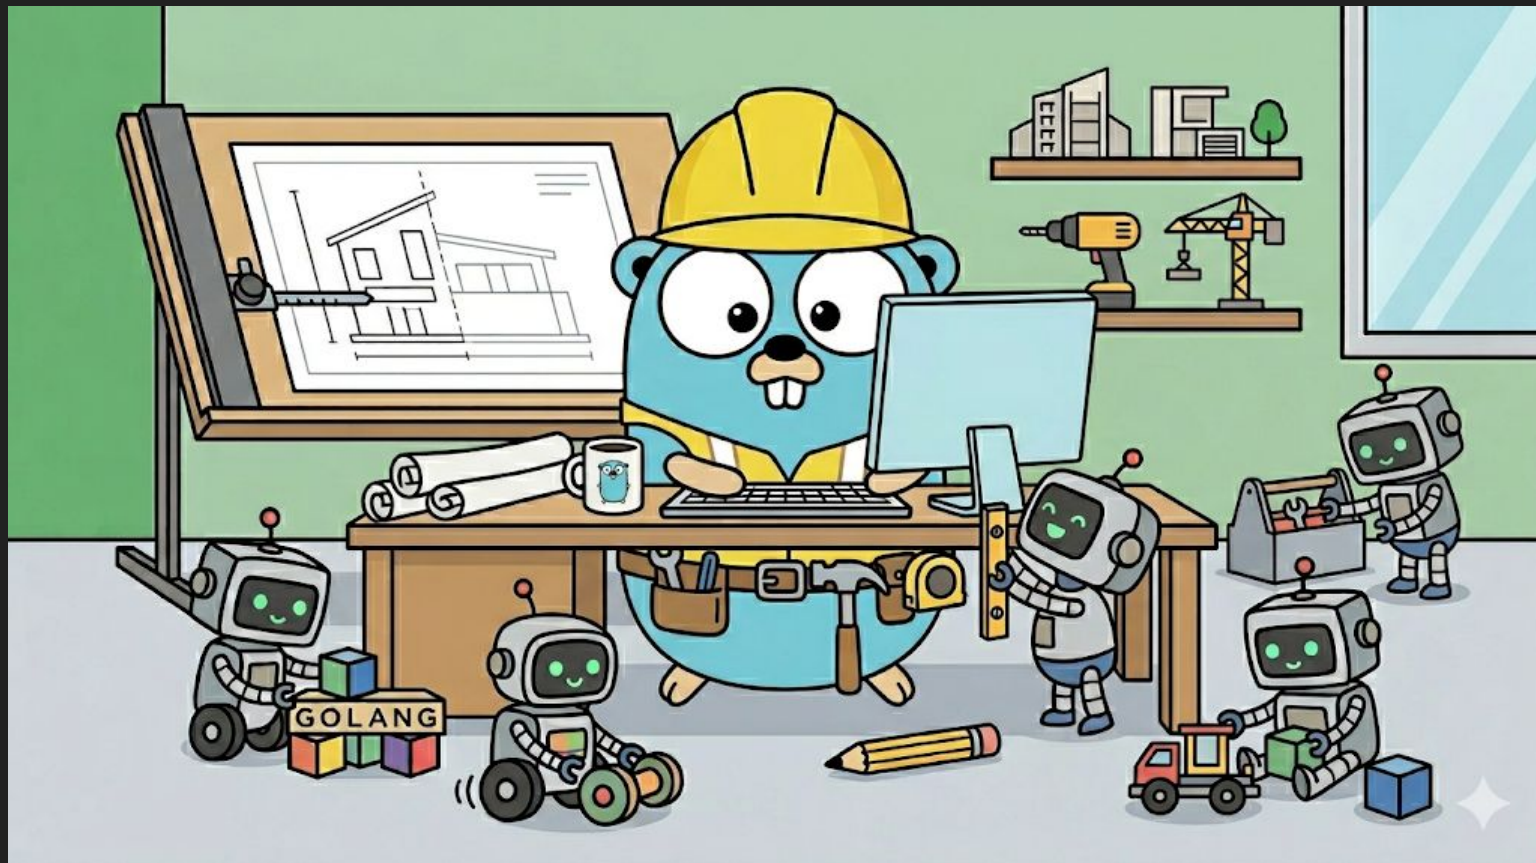

Even skeptical people follow that

Here, there was supposed to be a demo

It's builders' time!

Questions?
